

Ans 1. It is a clear example of star schema, which is simple and intuitive as well.

Ok now let's talk about Fact and Dimension table

So, **FACT_CANDIDATES - Fact Table**

- **Primary Key:** CANDIDATE_ID
- **Foreign Keys:**

DATE_ID links to DIM_DATE

GENDER_ID links to DIM_GENDER

NATIONALITY_ID links to DIM_NATIONALITY

DEPARTMENT_ID links to DIM_DEPARTMENT

Also, CANDIDATE_id will join to DIM_CANDIDATE (here candidate_id is acting as both primary and foreign key)

Dimensions Table (No Foreign Keys are there only primary keys)

DIM_DATE – Primary key DATE_ID

DIM_CANDIDATE – Primary key CANDIDATE_ID

DIM_GENDER – Primary Key GENDER_ID

DIM_NATIONALITY – Primary Key NATIONALITY_ID

DIM_DEPARTMENT – Primary Key DEPARTMENT_ID

Ans 2. Commission =

SWITCH(

True(),

'Date'[Date] >= Date(2020,1,1) && 'Date'[Date] <= Date(2020,2,28), [Revenue] * 0.10,

'Date'[Date] >= Date(2020,3,1) && 'Date'[Date] <= Date(2020,3,31), [Revenue] * 0.15,

[Revenue] * 0.10

)

Ans 3. SELECT Country_name , population

From countries

Order by population

Limit 10;

Ans 4. If we are talking about filter available on pane and not dax filter, so their purpose is different filter is basically hidden from users and only shows limited data on charts, slicer allows user to interactively filter.

also, filters are applied on visual, page level and report level. Slicer will affect the whole page or report. This is the biggest difference.

Ans 5. Yes, we can import custom visuals in power bi using power bi marketplace. We can go to get more visuals lots of custom visuals are available.
